Projects

Farmer assistance application | *Html, CSS, JavaScript*

- The application allows users to calculate the time required for tasks such as harvesting or ploughing, facilitating better time management for farmers.
- The application employs HTML, CSS, and JavaScript to create an interactive and user-friendly interface for farmers to input data and receive accurate calculations.

Ecommerce web application | *React JS*

- In this project I explore the external API to fetch the products data and displayed on user interface (UI).
- Adding products to the cart and displaying prices as per user selected number of items.
- User can easily use this application and orders the products in Online.

Employee Management System | *JAVA*

- In this project, the employee details are managed by collection framework performing CRUD operation.
- By this we can Add Products, display the products, Search based on different states of employee, Update the states of employee, Remove employee from database.
